Executive Summary

Senior Full-Stack Engineer with over 8 years of experience building high-performance distributed systems and intuitive user interfaces. Expert in **Rust (Actix)** and **Svelte**, with a deep background in **GCP** and **Kubernetes**. Passionate about enhancing **developer experience (DX)**, mentoring engineering teams, and contributing to open-source tooling. Proven track record in transitioning legacy monoliths to scalable microservices and implementing robust CI/CD pipelines.

Core Competencies

- Systems Programming (Rust)
- Modern Frontend (Svelte, TypeScript)
- Cloud Native Architecture (GCP, K8s)
- Microservices & API Design
- CI/CD & DevOps Automation
- Technical Mentorship & Leadership

Professional Experience

Senior Platform Engineer

2021-03 - Present

Remote

DevStream Solutions · full-time · Remote

Technologies: Rust, Actix, GCP, Kubernetes, Terraform, TypeScript

- Architected and deployed a high-throughput telemetry ingestion service using **Rust** and **Actix-web**, reducing latency by 40% compared to the previous Node.js implementation.
- Led the migration of core services from on-premise to **GCP**, leveraging GKE and Cloud Spanner for global scalability.
- Developed a custom internal CLI tool in Rust to streamline developer workflows, improving deployment frequency by 25%.
- Mentored 4 junior and mid-level engineers through code reviews, architecture workshops, and pair programming, fostering a culture of continuous learning.
- Implemented comprehensive **CI/CD pipelines** using GitHub Actions and Docker, ensuring 99.9% build reliability.

Full-Stack Developer

2018-06 - 2021-02

Austin, TX

Interface Labs · full-time

Technologies: Svelte, TypeScript, Node.js, AWS, PostgreSQL

- Designed and built a real-time dashboard using **Svelte** and SvelteKit, providing users with instant insights into system performance.
- Optimized frontend bundle sizes by 60% through advanced tree-shaking and Svelte's compile-time optimizations.
- Collaborated with product designers to create a reusable UI component library, ensuring visual consistency across multiple product lines.
- Integrated AWS Lambda and API Gateway to handle bursty traffic patterns for seasonal marketing campaigns.

Software Engineer

2015-07 - 2018-05

Boston, MA

DataPulse Systems · full-time

Technologies: Kotlin, JVM, Kafka, Docker, Spring Boot

- Developed event-driven microservices using **Kotlin** and **Apache Kafka** to process millions of events per second.
- Refactored a legacy Java monolith into a suite of Spring Boot services, improving maintainability and deployment velocity.
- Implemented automated integration testing suites that reduced production regressions by 15%.

Education

Massachusetts Institute of Technology (MIT)

B.S. in Computer Science and Engineering

Open Source Projects

Rust-DX-Toolkit

 github.com/arivera-codes/rust-dx-toolkit

Technologies: Rust, Macros

An open-source collection of macros and utilities designed to improve the developer experience when building Actix-web services.

- Gained 500+ stars on GitHub.
- Used by several small startups to accelerate their Rust backend development.

Technical Skills

Cloud & Infrastructure: Google Cloud Platform (GCP), Kubernetes (K8s), Docker, Terraform, AWS, GitHub Actions

Languages: Rust, TypeScript, Kotlin, Go, SQL

Frameworks & Libraries: Actix-web, Svelte / SvelteKit, React, Spring Boot, Tokio

Architectures: Microservices, Event-Driven Architecture, REST & gRPC, Serverless
